

# Atomic Learning

All ESBOCES Model Schools districts will once again have access to **Atomic Learning!** Atomic Learning provides video tutorials and resources for a large number of applications and now contains ideas for both project-based and 21<sup>st</sup> Century projects.

- Each Model Schools district with 2,000 students or less will receive one license
- Each Model Schools district with 2,001 students or more will receive two licenses

Ideas for strategically distributing licenses include providing the non-transferrable license to the people most closely associated with supporting the use of instructional technology in your district or to the folks that need the most support. They can use Atomic Learning for their own professional development, to get project ideas, or to integrate into their presentations to colleagues.

**To get started**, provide the following information for each license holder to Cindy Hodun at [chodun@esboces.org](mailto:chodun@esboces.org). Please submit by Oct 14, 2011.

1. First and last name
2. District
3. Email address
4. School district
5. Building
6. Curricular area
7. Grade level

Assistant Superintendents for Curriculum and Instruction and Technology Directors are asked to coordinate the license distribution for each district.
